

Problem with identifying duplicate records- June - October 14, 2008

This problem was originally identified and documented in early June, 2008. While partially fixed, it did not completely identify duplicates within FECfile; particularly the software did not identify possible duplicates where the only difference is that the middle initial or middle name appears in the one record as part of first name. Since this was not fixed, some duplicates were missed in the July quarterly reporting.

An amended July quarterly report was submitted September 26, 2008 resolving duplicates not caught by the merge process in FEC file.

Every effort has been made to resolve such duplicates in the September 2008 quarterly reporting. As of 10/14/2008, FEC Electronic Filing has not notified that a correction of the problem is in effect.
